

Round cable stripper for multifiber cables, data cables and coaxial cables

Professional tool for the stripping of cables with different diameters. It is specially designed for multifiber cables, data cables and coaxial cables. It allows fast, safe and precise stripping of PE, PVC, LSFH, etc. sheaths.

Its operating range is adjustable from 4.5 to 29 mm diameter. The cutting depth is easily adjusted from 0.1 mm to 3 mm, by means of the height regulator incorporated in the base of the blade.

The rotation mechanism allows the fiber to be stripped under a triple action system:

- Circular opening (transversely to the hose)
- Perpendicular opening (longitudinally to the hose)
- Spiral opening (combination of the two previous ways, commonly used to remove high strength covers more easily)

Ergonomic and compact design facilitates handling and storage of the tool. In addition, it incorporates a spring lock, which keeps the cable secure while the sheath is being cut.

Supplied in individual box.

Ref.	2325
------	------

Logical ref.	OAIM
EAN13	8424450142554

Packaging info

Box	1 pcs.

Physical data

Net weight	120.00 g
Gross weight	120.00 g
Width	38.00 mm
Height	137.00 mm
Depth	27.00 mm
Main product weight	97.00 g

Highlights

- Regulation: allows stripping of cables with different diameters (between 4.5 and 29 mm)
- Versatility: the spiral cut allows stripping the fiber from the center of the cable, without the need of splitting it. It is also possible to strip from the ends
- Convenience: ergonomic design for easy handling
- Durability: the blade is hardened to guarantee a long service life
