Twin Transmodulator 8PSK - DVBC (QAM Annex A)

Transmodulator that generates two QAM Multiplexes from the services available in either one or two 8PSK TV SAT transponders of the same band and polarization.

Ref.	563701
EAN13	8424450149775

Packing

Box	1 pcs.
Bucket	18 pcs.

Physical data

Net weight	958.00 g
Gross weight	1,200.00 g
Width	50.00 mm
Height	219.00 mm
Depth	176.00 mm
Main product weight	916.00 g

Highlights

- Total or selective removal of the services present in the received transponder, to avoid them being detected (and memorized) by the receivers (STB)

- Editable TS_ID, which makes programme/service detection easier on the receiver (STB), since the channel scan is based on this identifier

- LCN (Logical Channel Number) allows the assignment of the services present in the output to an

LCN, which makes the ordering of the channels easier on the receivers (STB)

- Provides information regarding both the occupation of each specific service and the global output occupation, which allows the optimization of the services being distributed

- Can be remotely controlled using CDC (Headend control)

- Device monitoring and signal status LEDs

Main features

- Two independent tuners allowing more than 14 services per module

- Two output stages with packet generation above 6 MHz bandwidth

- Equipped with an input matrix to allow any input signal to be processed by any of the demodulators

- Output up to 1024 QAM

- Null packet insertion ("Stuffing") allows the receiver (STB) to perform a faster scanning
