

Top visor for Flex Floodlights

The top visor for Flex floodlights consists of a metal structure that prevents light leakage into the upper hemisphere of the floodlights. It is used to reduce light pollution and limit intrusive light, unwanted light that affects people.

Its main application is in outdoor installations, to maintain illumination over the area of interest and avoid the negative effects of intrusive light, both for the quality of the night sky and for the protection of the ecosystem and the vital rhythms of people. It is made of grey lacquered aluminium. Aluminium provides the right balance between strength and lightness, making it a very durable and easy-to-install complement.

Ref.	690310
Logical ref.	FFMC
EAN13	8424450295335

Packaging info

Unit	1 pcs.
-------------	--------

Physical data

Net weight	542.00 g
Gross weight	550.00 g
Width	550.00 mm
Height	160.00 mm
Depth	140.00 mm
Main product weight	542.00 g

Highlights

- Limits intrusive light
- Reduces light pollution
- High resistance and durability
- Installation accessories included
