

CoaxManager Software for CoaxData G.hn systems control

CoaxManager is an application that allows network managers to obtain greater control over a CoaxData network. With it is possible to establish the different operating roles of the CoaxData G.hn equipment, as well as check the status of the installation and the different links between the devices in the same G.hn network.

This application is freely available for PC. For correct execution, the PC must be connected by cable to at least one CoaxData G.hn Series device.

Ref.	100020
	COAXMANAGER

Utmärkande egenskaper

- Signal to noise ratio (SNR), received power spectral density (PSD), noise figure and G.hn link quality monitoring
- Domain G.hn master role configuration: Designate a node as a Master for a G.hn network with up to 16 final nodes

- Firmware update of CoaxData G.hn devices and configuration files
- Establishment of access keys for each of the system's networks. A maximum of four G.hn channels (each with a different key) can be installed on the same coaxial network
- Definition of QoS parameters on the devices
- Based in Java and compatible with Windows and Linux systems
- Language: English
